OmniMetrix, a Provider of Remote Monitoring and Control Systems for Gas Pipelines and Standby Generators, Adds New Fortune 500 Energy Customer

Buford, GA – August 14, 2019 – OmniMetrix, a provider of remote monitoring and control systems for gas pipelines and stand-by generators for businesses, homes, cell towers, and other critical equipment, today announced it has added another new Fortune 500 energy industry customer, increasing its penetration of the Fortune 500 and Fortune Global 500 to 25 companies. Following 3 months of in-field testing and evaluation, the customer has placed an initial order for OmniMetrix *Hero™ 2 Rectifier Monitor* units along with an annual service contract to monitor multiple points along its pipeline system in the United States.

The Hero 2 monitor is a field-serviceable, self-contained wireless remote Internet of Things (IoT) unit used to monitor and report on the state of health of rectifier systems used for corrosion protection on natural gas pipelines. The Hero 2's progressive modular design decreases installation time, reduces lightning surge damage and allows for easy technology upgrades. OmniMetrix wireless monitoring solutions improve safety and provide significant ROI versus the expense and periodic nature of physical inspections in the field. Additionally, OmniMetrix's patented remote processor reprogramming technology enables it to upgrade its monitoring software remotely, providing a key competitive advantage over other competing products.

OmniMetrix President & CEO, Walter Czarnecki, commented, "We are pleased to have deployed our *Hero 2* Rectifier Monitors to provide cathodic protection services using satellite transmission for this significant new customer. Given the strength of our technology and proven ROI of our monitoring solutions, supported by the highest levels of customer service, we are confident in the potential to expand our relationship with this customer and others in the pipeline industry.

"OmniMetrix will continue to launch innovative new products to meet the growing demand for remote monitoring and IoT solutions for the energy sector and for critical equipment such as stand-by generators and air compressors, used across all segments of industry."

OmniMetrix's Fortune 500 customers are spread across energy (28%), retail (20%), industrial (12%), and financial (8%) sectors. Aerospace and defense, automotive, chemical, hospitality, insurance, software, telecommunications, and utilities comprise the balance (32%) of these large customers. OmniMetrix also serves thousands of smaller corporate, government and military clients globally.

OmniMetrix™, Inc. (www.omnimetrix.net)
OmniMetrix is a pioneer in Internet of Things (IoT) wireless remote monitoring and control for gas pipelines and stand-by generators used for homes, cell towers, medical facilities, data centers, public transportation systems and federal, state and municipal government facilities. OmniMetrix is a proven solution for making critical systems more reliable with thousands of monitored assets.
