

REMOTE MONITORING FOR HEALTHCARE

95% OF GENERATOR FAILURES ARE PREVENTABLE WITH OMNIMETRIX®

Having backup emergency power is one of the most important investments that is made in your facility. Ensuring these generators will perform when called upon can literally mean the difference between life and death. You've done your research and selected the proper size, the brand you want and the best maintenance provider that fits your need. All set, right? Well, not really.

As reliable as generators have become over the years, they can still fail-to-start with no prior indication of issues. OmniMetrix provides you, your staff and your maintenance provider the ability to know the status of a generator 24x7x365 without having to be on site.

- Battery Voltage
- Fuel Level
- Engine Run Hours
- Percent Under Load
- Runtime Under Load
- Oil Pressure
- Instant Alarm Notifications via Email or Text

"With so many generators spread out over two counties, it is imperative to know when a generator is running due to a power failure, or when a generator requires service (particularly after hours). We needed one solution to monitor all our generators - for reliability and run status."

**Frank Kinik, Director of Facilities
Humility of Mary Health Partners**

OmniMetrix also aids in creating efficiency with NFPA 110 reporting requirements. OmniView, our cloud-based web portal, provides a powerful reporting tool that helps you comply with your required generator documentation without having to physically go to your generator.
